

# CRUSOURCE CRM

## Super Admin Portal

Product Requirements Document (PRD)  
Version 1.0

### 1. Executive Summary

The Super Admin Portal is an internal operations console for Crusource CRM that provides cross-organization visibility and secure administrative controls across a multi-tenant SaaS platform.

The goal is to keep the portal lean and production-ready by focusing only on high-value operational workflows instead of becoming a second CRM.

### 2. Vision

Within 30 seconds, an administrator should understand the health of the platform, identify customer issues, and perform essential administrative actions securely.

### 3. Information Architecture

The initial release intentionally contains only seven core modules.

| Module        | Purpose                       |
|---------------|-------------------------------|
| Dashboard     | Business overview             |
| Organizations | Customer management           |
| Billing       | Subscription management       |
| Feedback      | Product insights              |
| Audit Logs    | Administrative accountability |
| Analytics     | Product usage insights        |
| Settings      | Internal configuration        |

### 3. Core Modules

#### Dashboard

Provide an instant overview of platform health.

- Organizations
- Active Users
- MRR
- Failed Payments
- Revenue trend
- Recent activity

## ORGANIZATIONS:

| Field         | Description                                                                  |
|---------------|------------------------------------------------------------------------------|
| Company       | Customer organization name and primary identity.                             |
| Plan          | Current subscription plan (Free, Starter, Pro, Enterprise).                  |
| Status        | Account state — Active, Trial, or Suspended.                                 |
| Users         | Number of seats currently in use out of the total allocated.                 |
| Last Activity | Most recent customer activity indicating CRM usage.                          |
| Created On    | Date the organization was created.                                           |
| Renewal       | Next billing or subscription renewal date.                                   |
| Health        | Overall customer health indicator based on engagement and account status.    |
| Actions       | Quick administrative actions such as View, Manage, Suspend, or Extend Trial. |

### Health Indicator

| Status                                                                              | Meaning                                                        |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------|
|  | Healthy Active usage with no immediate concerns.               |
|  | At Risk Reduced activity or upcoming billing issues.           |
|  | Critical Inactive, suspended, or requires immediate attention. |

### Quick Actions

- View Company Details
- Manage Organization

- Extend Trial
- Change Plan
- Suspend Organization
- View Billing
- Review Usage Analytics

## Billing

Thin control layer over Rarzo Pay billing.

- Current plan
- Next renewal
- Seats
- Invoices
- Refund
- Retry payment

## Feedback

Centralize customer feedback into actionable insights.

- Bug reports
- Feature requests
- Status tracking
- Future AI summaries

## Audit Logs

Maintain accountability for administrative actions.

- Admin login
- Plan changes
- Trial extensions
- Billing actions

## Analytics

Reuse Vercel Analytics for executive visibility.

- Visitors
- Countries
- Cities
- Devices
- Top pages
- Signups by country

Settings

Minimal internal configuration.

- Feature flags
- Maintenance mode
- Admin management

6. Security Requirements

- Separate admin authentication
- Mandatory MFA
- Automatic session timeout
- IP and device logging
- Confirmation for destructive actions
- Immutable audit logs

7. Technical Architecture

| Layer     | Technology       |
|-----------|------------------|
| Frontend  | Next.js          |
| Backend   | FastAPI          |
| Database  | PostgreSQL       |
| Cache     | Redis            |
| Analytics | Vercel Analytics |
| Payments  | Rarzo Pay        |

Recommended repository structure:

apps/crm  
apps/admin  
backend/api  
backend/admin\_api  
shared

8. Implementation Roadmap

| Sprint | Deliverable          |
|--------|----------------------|
| 1      | Admin Authentication |
| 2      | Dashboard            |
| 3      | Organizations        |
| 4      | Billing              |
| 5      | Feedback             |
| 6      | Audit Logs           |
| 7      | Analytics & Settings |
