What Changed Since v1.0

Version 1.1 reflects the product as it is built today. The platform has grown from a three-role sales CRM with a fixed pipeline into a broader multi-tenant revenue workspace. The table below summarizes the most important differences from v1.0.

Area	v1.0 (July 2026)	v1.1 (September 2026)
Access model	Three fixed roles: Sales Rep (own), Sales Manager (own + team), Admin (full).	Configurable roles, profiles, module-level view/create/edit/delete rights, setup permissions, teams, team leads, and record-level access grants.
Pipelines	One standardized six-stage deal pipeline.	Multiple lead and deal pipelines with configurable stages, stage history, and a standard lead pipeline seeded at startup.
Reporting	Six fixed pre-built reports; custom report builder deferred.	Saved report builder (dimensions, measures, filters, preview, run, share), analytics boards, and a Forecast module. Some report operations remain incomplete.
Documents	Basic file library; version control deferred.	Folders, version history, sharing, public share links, recycle bin, in-app spreadsheet and DOCX editing, and a Templates library.
Email & calendar	Native email and calendar sync deferred.	Gmail-connected Inbox and Google Calendar synchronization delivered (where Google is configured).
AI	Six AI features: lead scoring, email drafts, deal risk alerts, meeting/call summaries, duplicate detection, chat assistant.	Loop AI assistant (public and authenticated) with streaming answers, citations, chat history, and CRM embedding sync. The other five v1.0 AI features are not present in the current product (see Section 13).
Sign-up	No self-service sign-up; Admin creates every user.	Public registration, Google sign-in, OTP email verification, and organization invitations.
New modules	—	Campaigns, Team Space, Approvals, Calendar, Inbox, Global Notes, Notifications, Templates, Audit & Login History, Recycle Bin, Data Administration, Billing, Onboarding.
Not carried forward	Workqueues; global Quick-Create (+) menu; six fixed reports.	Not evidenced in the current product. Dashboard quick actions and saved reports cover the nearest use cases.

1. Introduction

1.1 Purpose of This Document

This PRD defines the vision, scope, features, and success criteria for Crusource CRM, a B2B sales CRM platform. It is intended to align business stakeholders, product managers, designers, and engineering teams on what the product does, why it exists, and the value it delivers. Version 1.1 is an as-built document: it describes what the product does today, labels how complete each capability is, and keeps unfinished ideas in the roadmap rather than presenting them as features.

1.2 Product Summary

Crusource CRM is a multi-tenant web application that helps sales and customer-facing teams manage the full journey from prospect discovery to customer engagement, forecasting, and ongoing account work. It brings customer records, sales pipelines, daily activities, email, documents, collaboration, governance, and business insights into one permission-aware workspace.

Each organization works in an isolated workspace with no mixing of data between organizations. Access is controlled by role, profile, module permissions, team membership, and record-level rules.

2. Problem Statement & Purpose

Sales teams commonly keep lead data, meeting history, inbox conversations, documents, and pipeline status in separate tools. This creates duplicate records, unclear ownership, weak handoffs, unreliable forecasts, and limited auditability. Administrators also need to govern access and recover data without making everyday sales work cumbersome.

Crusource CRM closes these gaps by giving every organization:

- A single source of truth for leads, contacts, accounts, deals, and their related activities, notes, and documents.
- A repeatable sales process built on configurable pipelines and stage history.
- Visibility into pipeline health and team work through dashboards, reports, analytics, and forecasts.
- Controlled collaboration: shared lead pools, access requests, reassignment, and approvals that keep ownership clear.
- Fine-grained, role- and permission-based access so data is only visible to the people who should see it.
- An AI assistant that answers questions from the organization's own CRM data, with citations to the source records.

3. Target Users

Crusource CRM is built for small-to-mid-sized B2B sales organizations. Within a customer organization it serves the following groups. How access is enforced for each is covered in Section 8.

User group	Day-to-day priorities	What they need from the product
Sales representatives	Working a personal book of leads, contacts, accounts, and deals; hitting quota.	A focused workspace with fast data entry, daily task and meeting views, email context, and Loop AI help.
Sales managers	Accountable for team pipeline and performance; coaching and unblocking reps.	Pipeline visibility, forecasts, reports, analytics, and controlled reassignment of team work.
Team leads	Distributing pooled leads and resolving access and reassignment requests.	Team Space pool, request queues, and team dashboards.
Administrators	Keeping configuration and access accurate as the team grows.	User, team, role, profile, pipeline, template, data, billing, and audit controls without engineering involvement.

4. Business Goals & Objectives

- **Capture more revenue opportunity** — structured lead capture, qualification, routing, and conversion so no interest goes unfollowed.
- **Improve pipeline reliability** — configurable pipelines with stage history and win probabilities feed forecasts and analytics.
- **Reduce system switching** — email, calendar, documents, campaigns, and notes live alongside customer records.
- **Enable data-driven management** — dashboards, saved reports, analytics boards, and forecasts without manual status reporting.

- **Scale collaboration safely** — team pools, access requests, reassignment, and approvals keep ownership clean through growth and turnover.
- **Protect data integrity and security** — tenant isolation, least-privilege permissions, audit logs, login history, and recoverable deletes.
- **Make AI useful but controlled** — assistant answers grounded in permitted CRM data, never silently changing records.

5. Product Scope

5.1 In Scope (Version 1.1)

- Lead capture, qualification, assignment, routing, import, and conversion into Contact, Account, and optional Deal.
- Contact and Account management with hierarchies and a contextual detail view combining related records.
- Multiple configurable lead and deal pipelines with list and Kanban views and stage history.
- Activities: Tasks, Meetings, Calls, Notes, and a combined Calendar, with Google Calendar sync.
- Gmail-connected Inbox and email context on records.
- Email campaigns with recipient tracking and send, open, and bounce metrics.
- Documents with folders, versions, sharing, public links, recycle bin, and in-app spreadsheet and DOCX editing; reusable Templates.
- Dashboard, Analytics boards, Reports, and Forecast.
- Global search with filters, recent searches, and saved searches.
- Team Space (lead pool, dashboards, access and reassignment requests) and Approvals.
- Administration: users, invitations, teams, roles, profiles, permissions, organization settings, data import/export/backup, storage, billing, audit, login history, and recycle bin.
- Loop AI assistant (public and authenticated), notifications, onboarding, and in-product feedback.

5.2 Out of Scope / Not Yet Delivered

The following are not part of the current product and are tracked in Section 13: AI lead scoring, AI-drafted emails, deal risk alerts, meeting/call summarization, AI duplicate detection at record creation, workqueues, automation administration, campaign click tracking and pause/resume, report export/import, and multilingual UI.

The product is also not intended to replace a finance/ERP system, a customer-support platform, a full marketing-automation suite, or a general-purpose file drive.

6. Key Features

Each table summarizes a functional area at business level with its current status.

6.1 Navigation & Workspace

Capability	What it does
Permission-aware sidebar	Shows only the modules a user is allowed to view: Analytics (Reports, Analytics, Forecast), Sales, Activities, Team Space, and Administration groups.
Dashboard	Personal landing page with KPI cards, recent leads, tasks, meetings, calls, deals, and quick actions. Saved dashboard-layout preferences are not fully connected.
Global search	Command-palette search across CRM records and documents, grouped results with filters, typo tolerance, recent and saved searches. Coverage depends on indexed records.

Capability	What it does
Notifications	Header bell with unread count, drawer, mark-one and mark-all read, and links to related records. No live push stream or broadcast announcements.
Global Notes	Header-opened notes drawer with notepad and overview; notes on leads, contacts, accounts, deals, and pool; @mentions, search, and pagination. No pinning, sharing, or archive.
Personal settings & onboarding	Avatar, table view mode, Google account linking, feedback form, and personal onboarding checklist. No password-change form or notification-preference editor.

6.2 Core Sales Modules

Module	What it does
Leads	Create, import, filter, assign, bulk-manage, and convert leads in list or Kanban pipeline views with drag-and-drop stage movement; detail drawer with timeline, notes, tasks, meetings, calls, attachments, and email context. Conversion creates or links a Contact, Account, and optional Deal. No lead scoring.
Contacts	Individual stakeholder profiles linked to accounts, with duplicate-email checks, LinkedIn and address fields, related deals and activities, reassignment, and bulk import.
Accounts	Company records with parent-child hierarchy, employees, revenue, billing address, related contacts, deals, activities, documents, duplication, bulk owner reassignment, and bulk import.
Deals	Kanban and list views, multiple pipelines, stage history, amount and currency, stage win probability, products (line items), expected close date, loss reason, owners and teams, saved views, import and export.
Pipelines	Lead and deal pipeline and stage management with stage history and standard lead-pipeline seeding. Admin configuration is not equally complete across all workflows.
Campaigns	Create and edit email campaigns, choose lead or contact recipients, compose content, send or schedule, cancel, and review sent, failed, opened, bounced, and complaint statistics. Delivery depends on configured email infrastructure. No click tracking or pause/resume.

6.3 Activities, Calendar & Communication

Capability	What it does
Tasks	Priorities, due dates, assignees, related records, notes, bulk actions, and views for all, pending, overdue, completed, and team tasks; organization task templates. Repeat configuration exists but automatic recurrence execution is not confirmed.
Meetings	Agendas, attendees, action items, history, reminders, and Google Calendar synchronization including RSVP state.
Calls	Call logs with direction, status, duration, recording metadata, outcome, and related record.
Calendar	Month, week, and day views combining tasks, meetings, and calls.
Inbox & Email	Gmail-connected inbox with threads and message detail, and email context on record timelines. Requires a connected Google account.
Unified activity timeline	Chronological history of tasks, meetings, calls, notes, and email on each record. Assembled in the frontend rather than a single backend timeline service.

6.4 Documents & Templates

Capability	What it does
Document library	Upload, download, folders and categories, assignment, and linking to leads, contacts, accounts, and deals; preview for PDF, DOCX, images, text, and spreadsheets.
Version history	Track and manage versions of uploaded files.

Capability	What it does
Sharing	Share with users or create tokenized public links with validation and rate limiting; public shared-document page.
In-app editing	Edit spreadsheets and DOCX files inside the CRM. No OnlyOffice or Collabora integration.
Recycle bin	Restore or permanently delete removed documents.
Templates	Template library and Template Studio to create, categorize, edit, and use reusable document structures.

6.5 Reporting, Analytics & Forecasting

Capability	What it does
Reports	Saved reports with a live builder (dimensions, measures, filters, grouping, visualization), preview, ad-hoc run, and share. Export, import, bulk delete, and field suggestions are empty stubs and not user-facing.
Analytics	Charts, KPI widgets, and dashboards with date range, grouping, and drill-down; save, update, and delete boards and cards. Board management is not consistently exposed as a complete flow.
Forecast	Pipeline value, weighted value, won and open totals, stage distribution, and owner and team filters by period. Configuration options are limited.

6.6 Team Collaboration & Approvals

Capability	What it does
Team Space pool	Shared lead pool for team leads and authorized members, pool notes, and Teams Dashboard.
Record access requests	Users request edit access to restricted lead or deal records; reviewers approve or reject; grants show active, expired, or revoked status.
Reassignment requests	Leads and deals can be submitted for reassignment and reviewed by authorized approvers.
Approvals	Review record-access and mass-change requests with approve/reject actions and history. The `automations` setup permission currently gates this API.

6.7 Administration, Security & Governance

Capability	What it does
Users & invitations	Create, update, activate/deactivate, and delete users; role and profile assignment; invitation lifecycle; reporting hierarchy.
Teams	Team creation, membership, and team-lead designation.
Roles, profiles & permissions	Role hierarchy, profiles, module view/create/edit/delete rights, setup permissions, and record permissions.
Organization & onboarding	Organization details and settings, and an organization setup journey.
Billing(Not fully implementd)	Plan, subscription status, usage, quotas, and supported change/cancel/resume/trial actions.

Capability	What it does
Data administration	CSV import with templates and validation, CSV export, backup API, and storage overview. Several areas have backend capability without a complete user workflow.
Audit log & login history	Filterable audit logs and login-history browsing for administrators and users.
Recycle bin	Recovery of removed leads, deals, contacts, accounts, and documents. No notification or user recycle bin.
Automation administration	Placeholder page only.
Feedback	In-product feedback form available to every user.

6.8 Integrations

Integration	What it does	Status
Google Workspace	Google sign-in, Gmail-connected inbox and sending, Google Calendar sync, and free/busy checks, where configured.	IMPLEMENTED
File storage	S3-compatible object storage for documents and attachments.	IMPLEMENTED
AI provider	Powers Loop AI answers and CRM embeddings.	IMPLEMENTED
Background schedulers	Calendar polling and campaign/email processing run outside normal requests.	INTERNAL
Zoho	OAuth endpoints exist; user experience, sync model, and readiness need validation.	PARTIALLY IMPLEMENTED
All Buddy	Event and card-scanning partner integration; lead ingestion requires an enabled partner contract.	DOCUMENTED ONLY

7. AI Capabilities

A guiding principle governs AI in Crusource CRM: the assistant informs but never acts on its own. Loop AI answers questions and retrieves context; it does not silently change CRM data. AI introduces no new access rules — answers are drawn from organization-scoped data.

Capability	What it does	Status
Public Loop AI	Answers product and marketing questions on the landing, integrations, docs, and FAQ pages, with query limiting for unauthenticated visitors.	IMPLEMENTED
Authenticated Loop AI panel	Side panel opened from the dashboard header with real-time streaming answers, suggested questions, and Markdown-formatted responses.	IMPLEMENTED
CRM retrieval & citations	Hybrid retrieval over the organization's CRM records and documents, with structured source citations and live database metrics and duplicate audits.	IMPLEMENTED
Chat history	Retrieve and clear conversation history per session.	IMPLEMENTED
Embedding synchronization	Index organization CRM records for AI retrieval.	IMPLEMENTED

AI features described in v1.0 that are not present in the current product — lead scoring, AI-drafted emails, deal risk alerts, meeting and call summarization, and duplicate detection at account creation — are carried to Section 13.

8. Roles & Access Control

v1.0 defined three fixed roles. v1.1 replaces that with a layered, configurable model. A user's effective access is the combination of the layers below, and the sidebar, pages, records, and actions all follow it.

Access layer	How it works
Organization	Every protected record belongs to an organization; users only reach data in their own organization.
Role & hierarchy	Roles define access levels and reporting relationships between users, such as which reps report to which manager.
Profile	A profile is assigned to each user and defines what they can do in the product.
Module permissions	View, create, edit, and delete rights per module (Leads, Deals, Reports, and so on). Modules a user cannot view are hidden from navigation.
Setup permissions	Control access to administration areas such as users, organization, billing, and data administration.
Teams & team leads	Team membership and team-lead capability unlock Team Space and team-scoped work.
Record permissions	Access to individual leads and deals can be requested and granted with active, expired, or revoked status.

Typical personas map onto these layers as follows:

Persona	Typical access	Notable capabilities
Sales representative	Assigned modules and records they own or that are shared with them.	Works leads, deals, and activities; uses Loop AI; requests access to restricted records.
Sales manager	Team-level visibility through hierarchy and manager permissions.	Reviews team pipeline, forecasts, and reports; reassigns work; approves controlled changes.
Team lead	Team Space and team-lead permissions.	Manages the lead pool and handles access and reassignment requests.
Administrator	Setup permissions or administrator status.	Manages users, teams, roles, profiles, pipelines, organization, data, billing, audit, and recovery.

Client-side controls are never treated as sufficient: APIs enforce organization scope and permission checks. A user without access to a record uses the Team Space request path instead of receiving the record.

9. Key User Journeys

9.1 Administrator — Organization & User Setup

A new customer registers with email and password or Google sign-in and verifies their email with a one-time code. The administrator completes the organization onboarding journey, invites teammates, assigns roles, profiles, and teams, configures pipelines and settings, and imports existing data. Invited users accept their invitation and land in a workspace scoped to their permissions.

9.2 Sales Representative — Lead to Closed Deal (Core Journey)

A rep opens the Dashboard, then creates or imports a lead, qualifies it, and moves it through a lead pipeline while logging calls, tasks, meetings, notes, and documents. Converting the lead creates or links a Contact, Account, and optional Deal. The rep then moves the deal through its pipeline stages

with amount, products, and expected close date until it closes as won or lost. Email, Google Calendar, and the activity timeline keep the full customer history in one place.

9.3 Team Lead & Manager — Collaboration and Controlled Handoff

A team lead works the shared lead pool and Teams Dashboard. When a user needs edit access to a restricted lead or deal, or wants a record reassigned, they submit a request. An authorized reviewer approves or rejects it, and the change and its history are recorded. Managers use Forecast, Reports, and Analytics to review pipeline health and redistribute work.

9.4 Campaign Operator — Outreach and Response Monitoring

An authorized user builds a campaign audience from leads or contacts, composes content, and sends or schedules it. The system processes recipients in the background and records sent, failed, or skipped state, with open, bounce, and complaint data where available. The operator investigates failures and cancels campaigns if needed.

9.5 Administrator — Govern, Report, and Recover

Administrators review users, roles, teams, audit logs, and login history; monitor billing, usage, and storage; run CSV import and export; and restore accidentally removed leads, deals, contacts, accounts, and documents from the recycle bin. Departing users are deactivated and their records reassigned.

10. Business Rules

Area	Rule
Tenancy	Each organization operates in an isolated workspace. Tenant, ownership, and audit attribution are never client-authoritative.
Onboarding & access	Users join by registration or by accepting an organization invitation. Access is then determined by role, profile, module permissions, setup permissions, teams, and record permissions.
Subscription	Billing exposes plan, status, usage, and quotas. The 14-day free trial from v1.0 is retained as the intended model and should be confirmed (Section 15).
Lead lifecycle	Leads move through stages of a lead pipeline and can be converted. Conversion creates or links a Contact and Account and optionally creates a Deal, retaining source and relationship information.
Pipelines	Deals and leads belong to a pipeline and stage. Stage changes are recorded in stage history. Deal amounts and stages feed Forecast and Analytics.
Record access	Users may request edit access to restricted lead or deal records. Approved grants carry active, expired, or revoked status and are audited.
Reassignment & approvals	Leads and deals can be submitted for reassignment; reviewers approve or reject; approved actions are recorded.
User deactivation	Deactivated users lose access; records they created are retained and can be reassigned.
Deletion & recovery	Deleting leads, deals, contacts, accounts, and documents is recoverable through the recycle bin. Destructive actions require confirmation.
Document sharing	Public links use tokens with validation and rate limiting and expose only explicitly shared content.
Campaigns	Delivery depends on configured email infrastructure. A failed delivery is never reported as sent. Recipients can unsubscribe.
AI governance	Loop AI is read-only and organization-scoped, grounds answers in retrieved CRM context with citations, and never changes records on its own.

11. Success Metrics

Baselines should be established before targets are set.

Category	Metric	What it tells us
Adoption	Daily and weekly active users by role; organizations completing onboarding and creating or importing a first record.	Whether teams adopt the CRM in daily work.
Adoption	Trial-to-paid conversion.	Whether the product delivers value during evaluation.
Sales efficiency	Time from new lead to first activity and to conversion; lead-to-conversion rate.	Whether structured capture shortens the path to an opportunity.
Sales efficiency	Deal cycle time, win rate by stage, and share of deals with no recent activity.	Whether pipelines are actively worked.
Data quality	Required-field completion, records with an owner, active deals with stage, amount, owner, and close date.	Whether data supports reliable reporting and forecasting.
Collaboration	Access and reassignment requests resolved within the agreed time.	Whether Team Space keeps work moving.
Engagement	Campaign send success, open and bounce rates.	Whether outreach is reaching recipients.
AI	Loop AI usage and citation-backed answer rate; user feedback on answers.	Whether the assistant is useful and trustworthy.
Reliability & security	API error rate, failed campaign sends, failed calendar syncs; cross-organization access incidents.	System health. Cross-organization access incidents must be zero.
Business outcome	Forecast accuracy (predicted vs. actual closed revenue).	Whether pipeline data gives leadership a reliable signal.

12. Risks & Assumptions

12.1 Risks

Risk	Potential impact	Mitigation
Partially complete modules	Reports, analytics, forecast, Team Space, approvals, data admin, billing, recovery, and pipelines contain unfinished workflows; users may expect more.	Define completion criteria; label or hide unfinished actions; do not market incomplete features as complete.
Marketing copy ahead of product	Public copy advertises duplicate auditing, pipeline health checks, and natural-language answers beyond what is established as dedicated workflows.	Align public claims with verified capability.
Multi-tenancy regression	A scope or permission defect could expose another organization's data.	Defense in depth in guards, handlers, and repositories; tests, review, and audit logging.

Risk	Potential impact	Mitigation
External dependencies	Google, email, storage, and AI providers can be unavailable or misconfigured.	Status visibility, safe retries, configuration validation, monitoring.
AI accuracy	Retrieval or model output can be incomplete or wrong.	Ground answers in scoped context and citations; keep the assistant read-only; gather feedback.
Background jobs	Behavior can differ between synchronous local mode and worker deployment.	Test both paths; define idempotency, retries, and monitoring.
Data lifecycle	Retention, backup, deletion, and compliance obligations are not fully specified.	Obtain legal and security approval before general availability.
Data-entry discipline	Incomplete records weaken reports, forecasts, and search.	Bulk import, contextual creation, dashboard quick actions, and low-friction activity logging.

12.2 Assumptions

- Each customer organization operates as one workspace without sub-organizations.
- The configurable role, profile, and permission model can represent customers' team structures.
- Users have reliable internet access and use a standard web browser.
- Google, email, storage, and AI services are configured in each deployment where those capabilities are expected.
- Reports and dashboards refresh at a cadence suitable for daily sales operations, not real-time trading.

13. Future Enhancements (Post-V1.1 Roadmap)

13.1 AI and intelligence

- Lead scoring with a plain-language reason and configurable weights.
- AI-drafted follow-up emails that always require human review before sending.
- Deal risk alerts for stalled deals.
- Meeting and call summarization with suggested next steps.
- Proactive assistant: reminders and on-demand data summaries.

13.2 Engagement and integrations

- Campaign click tracking and pause/resume.
- Validated Zoho integration; enabled All Buddy lead ingestion.
- Live notification stream, organization announcements, and notification preferences.

13.3 Experience and platform

- Workqueues: a prioritized list of records needing attention (present in v1.0, not currently in the product).
- Persistent dashboard layout customization.
- Full multilingual UI; formal browser, accessibility, retention, and performance targets.

14. Feature Summary

Modules:

- Dashboard
- Analytics

- Reports
- Forecast
- Leads
- Contacts
- Accounts
- Deals
- Campaigns
- Pipelines
- Tasks
- Meetings
- Calls
- Calendar
- Global Notes
- Documents
- Templates
- Global Search
- AI (Loop AI)
- Inbox & Email
- Notifications
- Team Space
- Approvals
- Authentication & Users
- Roles, Profiles, Permissions & Teams
- Organization & Settings
- Data Administration
- Billing
- Onboarding & Feedback
- Audit & Login History
- Recycle Bin

15. Glossary

Term	Definition
Lead	A potential customer who has shown interest but is not yet a qualified opportunity.
Contact	An individual person a rep works with, linked to an Account.
Account	The company or organization a deal is made with; can have parent and child accounts.
Deal	An active sales opportunity tracked through a pipeline.
Pipeline / Stage	A configurable sequence of stages a lead or deal moves through.
Activity	A Task, Meeting, Call, or Note logged against a record.
Campaign	A targeted email send to selected lead or contact recipients.

Term	Definition
Profile	A permission bundle assigned to a user that defines what they can do.
Team Space	The area where team leads manage the lead pool and handle access and reassignment requests.
Approval	A review step for record-access, reassignment, or mass-change requests.
Recycle bin	Storage for removed records that can be restored.
Loop AI	The CRM's built-in AI assistant.
