

Crusource CRM — Version 1 Product Journey

Scope: How a user actually moves through the product, step by step, across the three roles: Admin, Sales Rep, and Sales Manager.

Table of Contents

Journey 1 — Admin: Organization & User Setup

Happens once, before anyone else can log in.

Step	Screen	Action	Result
1	Login	Admin logs in with the org's first Admin account	Lands on Home
2	Settings → Users	Click Add User	User form opens
3	Add User form	Enter name, email; select Role	User is created
4	Add User form	Select Reports To	Rep scoped to Manager

Outcome: Organization has an Admin, one or more Sales Managers, and Sales Reps each linked to a Manager. Roles are enforced from this point on — every screen a user sees from here is scoped by their role (see [Users & Roles](#) in the features doc).

Journey 2 — Sales Rep: Lead to Closed Deal

The core journey the whole product is built around.

Step 1 — Log In & Land on Home

Screen	What the Rep sees
Login	Email + password
Home	KPIs: Open Deals, Untouched Deals, My Leads, My Calls Today. Widgets: My Open Tasks, My Meetings, Today's Leads, Leads Closing This Month — all scoped to "My" data only

Step 2 — A New Lead Comes In

Step	Screen	Action	Result
1	Leads (sidebar → Sales → Leads)	Click Create Lead (or lead arrives via CSV import)	Lead form opens
2	Create Lead form	Enter Lead Name, Company, Email, Phone, Source	Lead saved with Status = New
3	Leads list	Lead now appears under "My Leads"	Rep can open it

Step 3 — Rep Works the Lead

Step	Screen	Action	Result
1	Lead detail page	Click Log Call	Call logged: Subject, Call Type, Start Time, Duration, Contact Name, Owner — appears on the lead's activity timeline
2	Lead detail page	Click Create Task	Follow-up task created: Subject, Due Date, Priority, Contact Name, Owner
3	Lead detail page	Click Create Meeting	Discovery call scheduled: Title, From, To, Contact Name, Meeting Host
4	Leads list	Update Status to Qualified	Lead moves out of "New" view

Step 4 — Convert Lead to Deal

Step	Screen	Action	Result
1	Lead detail page	Click Convert	Convert form opens
2	Convert form	Confirm/enter Deal Name, Amount, Stage (starts at Qualification), Closing Date	On save: an Account and Contact are created (or linked if they already exist), and a Deal is created
3	—	Lead Status → Converted	Lead is now read-only; all further work happens on the Deal

Step 5 — Deal Moves Through the Pipeline

Step	Screen	Action	Result
1	Deals → Kanban View	Deal card sits in Qualification column	Rep drags card to next stage as work progresses
2	Deal detail page	Log calls, meetings, tasks against the deal (same pattern as Step 3)	Unified activity timeline builds up on the Deal
3	Deal detail page	Click Upload Document	Proposal/SOW attached, linked to the Deal
4	Deals → Kanban View	Drag card through Needs Analysis → Value Proposition → Id. Decision Makers → Proposal/Price Quote → Negotiation/Review	Stage field updates on each move

Step 6 — Deal Closes

Step	Screen	Action	Result
1	Deals → Kanban View	Drag card to Closed Won or Closed Lost	Deal marked closed; drops off "Open Deals" KPI
2	Home	"Open Deals" and "Leads Closing This Month" widgets update accordingly	Rep's dashboard reflects the closed deal

End state: One Lead has become one Account + Contact + Deal, with a full activity trail (calls, meetings, tasks) and any uploaded documents — visible on the Account's detail page under Contacts / Deals / Activities tabs.

Journey 3 — Sales Manager: Team Oversight

Step	Screen	Action	Result
1	Home	KPIs and widgets show Team data — the Manager's own records plus every Rep reporting to them	Manager sees team-wide open deals, leads, tasks
2	Leads / Deals / Accounts / Contacts	Browse any Rep's record on their team (not just their own)	Full visibility into team pipeline
3	Deals → Kanban View	View team's combined pipeline across all stages	Spot stalled deals across reps, not just their own

Step	Screen	Action	Result
4	Reports	Open Pipeline by Stage / Win-Loss Rate reports	Scoped to team data
5	—	Cannot access Settings → Users	Role assignment stays Admin-only

Journey 4 — Admin: Ongoing Monitoring

Step	Screen	Action	Result
1	Home	KPIs and widgets show organization-wide data	Full visibility across all reps and managers
2	Reports	Open any report from the report dashboard (Name, Description, Folder, Last Accessed, Created By)	Org-wide figures
3	Settings → Users	Deactivate a departing employee, or reassign a Rep to a different Sales Manager	Access revoked / reporting line updated
4	Any module	Full read/write access to every record in the org	Used for data cleanup, reassignment, or troubleshooting
