

Crusource Design System - Typography

Light mode, flat dashboard UI, condensed spacing, subtle borders, orange brand accent, semantic statuses, and Instrument Sans typography.

Core Aesthetics & Layout Rules

The system is optimized for HRMS dashboards where density, clarity, and fast scanning are more important than decorative UI.

Light Mode Only
Use bright surfaces, strong text contrast, and clear hierarchy.

Flat Design
Avoid shadows by default. Use subtle surface and border changes.

Subtle Separation
Use gray-200 borders instead of heavy dividers.

Typography Scale

Instrument Sans scale mapped to Tailwind-style naming.

Style	Token	Usage
Micro / Caption	10px / 14px · text-2xs	Inline tags, micro metadata, superscript
Detail / Small Body	12px / 16px · text-xs	Dense table cells, helper text, side labels
Body / Base	14px / 20px · text-sm	Default text, input values, list text
Lead / Subheading	16px / 24px · text-base	Section titles, sidebar items, card headers
Section Title	20px / 28px · text-xl	Dashboard section headers
Page Title	24px / 32px · text-2xl	Main page titles, key metric numbers
Hero Title	28px / 36px · text-3xl	Primary dashboard metrics, modal titles
Display Title	32px / 40px · text-4xl	Large statistics and splash screens

Spacing, Density & Radius

Condensed dashboard spacing using Tailwind spacing. Prefer p-3 and gap-2 for component density.

**space-1**
4px · Micro spacing

**space-2**
8px · Tight dashboard gap

**space-3**
12px · Default component padding

**space-4**
16px · Comfort padding

**space-6**
24px · Section spacing

**space-8**
32px · Large block spacing

**rounded-lg · 8px**
Default controls and cards

**rounded-xl · 12px**
Large panels and dashboard cards

**rounded-full · 999px**
Badges, avatars, pills

Crusource Design System - Color

A simple color foundation for Crusource HRMS: white-first layouts, orange actions, blue highlights, compact neutrals, and semantic status colors.

White main background Orange for actions Blue for highlights

Brand Colors

Use brand colors for product identity, key actions, active states, and highlight areas.

**Primary Orange** primary
#FF7700
Main CTA, active tabs, key actions

**Primary Pressed** primary-hover
#E06600
Button pressed and active states

**Blue 700** blue-700
#1D4ED8
Links, icons, secondary emphasis

**Blue Gradient** blue-gradient
Blue 100 → Blue 50
Hero banners and spotlight sections

Core Surfaces & Neutrals

Keep this simple. White is the main product background. Use only these core neutrals for structure, borders, metadata, and text.

**White** white
#FFFFFF
Main app background and content cards

**Sidebar Base** sidebar
#F5F7FA
Left navigation and app shell areas

**Border** gray-200
#E5E7EB
Dividers, inputs, cards, table lines

**Muted Text** gray-500
#6B7280
Descriptions, helper text, metadata

**Primary Text** gray-900
#111827
Headings and important readable text

Semantic Colors

Use subtle background + darker text pairs for HRMS statuses, alerts, badges, and row states.

**Success** green
#F0FDF4 / #15803D
Approved, active, completed

**Warning** amber
#FFFBE8 / #B45309
Pending, attention required

**Error** red
#FEE2E2 / #B91C1C
Rejected, failed, destructive

**Info** blue
#EFF6FF / #1D4ED8
Informational notes and hints

Use Cases

Where each color should be applied inside the HRMS product.

Buttons

Approve

View Details

Orange should be used for the main action. Blue can support secondary actions.

Hero / Search Banner

Talent Vault

Use gradient for hero/search sections only.

Use the blue gradient only for important top sections, not every card.

Status Badges

Approved

Pending

Rejected

Use semantic colors for approvals, pending items, rejection states, and alerts.

Dividers & Borders

Employee row

Payroll row

Use Gray 200 for card borders, table dividers, input borders, and layout separation.

Notes

Simple rules for keeping the color system clean.

Use white as default

Most HRMS screens should feel clean and open. White should remain the main app and content background.

Keep orange limited

Do not overuse orange. It should point users toward the most important action on the screen.

Use gradient carefully

The blue gradient should feel premium and intentional. Use it only for high-value highlight sections.
